

VERIDIUMID

AN AUTHENTICATION PLATFORM USING BIOMETRICS

VeridiumID provides a secure and convenient multi-factor biometric authentication platform for employees and customers. This independent authentication layer allows enterprises the freedom to customize the user experience - choosing the best biometrics for their needs - from native (fingerprint or face) - to Veridium's proprietary 4 Fingers TouchlessID, or other 3rd party biometrics.

UNIVERSAL EMPLOYEE ACCESS TO MULTIPLE ENVIRONMENTS

With VeridiumID you can access a variety of different corporate environments (IAM, VDI, VPN, cloud, legacy) with the same convenient user experience. Organizations have the flexibility to easily adopt new applications and workflows while maintaining access to legacy systems and applications. Gartner notes that "[Veridium has] a robust and flexible solution for Windows AD integration." VeridiumID business adaptors integrate seamlessly with Microsoft Active Directory, Citrix, IAM, and SaaS systems using standard authentication protocols - LDAP, RADIUS, SAML and OpenID Connect. The business adaptors help accelerate implementation.

ABSTRACTING AUTHENTICATION SECURITY

Security controls can be managed consistently when the authentication layer is abstracted. Even if you have an IAM solution, the independent authentication layer helps IT deliver consistent user experiences. Veridium integrates with the leading IAM solutions including: Okta, Ping, and ForgeRock. If your organization is migrating to Windows 10 or to Citrix Workspace, assuring employees have reliable and secure access during these transitions will make migration easier for both employees and IT. Veridium assures that authentication security is independent of individual environments or solutions.

Gartner

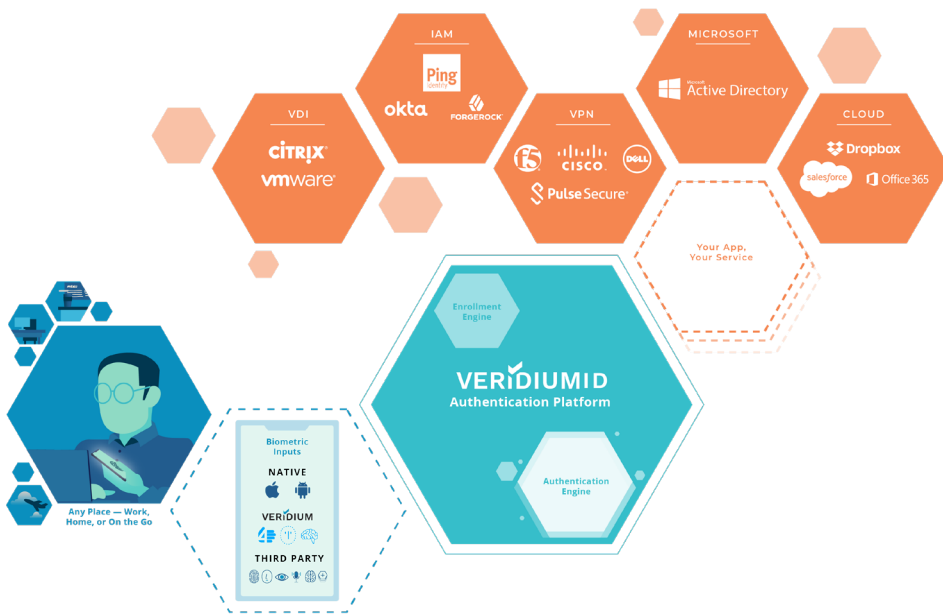

"Vendors with robust and flexible solutions for Windows AD integration include... Veridium."

Gartner Technology Insight for Biometric Authentication, Ant Allan and Tricia Phillips, 2017, 2018

"Veridium provides biometric authentication of remote users in a streamlined, secure way, complementing Citrix solutions and enhancing customer mobility."

Nabeel Youakim, Citrix Vice President of Products & Strategic Partners

UNLOCK THE POWER OF YOUR CITRIX VIRTUAL WINDOWS DESKTOP

Increase employee convenience, productivity, and enterprise security at a lower total cost of ownership for all your Citrix environments. VeridiumID is the only platform that can unlock a Windows virtual desktop using biometrics from a smartphone. VeridiumID makes it easier to migrate to or adopt Citrix Workspace with a consistent and streamlined user experience for all employees. Veridium integrates with Citrix Workspace, Citrix Virtual Apps and Desktop (XenApp & XenDesktop), Citrix ADC (NetScaler), and Citrix Content Collaboration (ShareFile). Veridium is Citrix Ready.

LOWER TOTAL COST OF OWNERSHIP

This software-only platform delivers a streamlined multi-factor solution without tokens or additional hardware at a lower total cost of ownership. Integration is quick and less expensive with easily accessible apps (iPhone /Android) or our SDK can be used for more custom implementations.

STRONG AUTHENTICATION

Veridium brings a device-agnostic, ubiquitous, multi-modal biometric authentication platform to companies looking to increase security without adding friction. By providing biometric choice, Veridium delivers a platform that seamlessly secures identity and privacy.

MULTINATIONAL SWISS BANK

80,000 employees and contractors worldwide are using Veridium's biometric authentication platform with geo-location capabilities to meet regulations for sensitive data.
